

AEGION®

Stronger. Safer. Infrastructure.®

Owners

Fyfe Company works with owners to develop turnkey solutions for their structural problems. Information is provided on different designs, including a cost benefit analysis to ensure that the owners receive all the information required to make an informed decision on how a project should proceed. Project-specific research and development may be performed in conjunction with the owner.

Our comprehensive service package to facility managers and owners varies from:

1. Site visits (where warranted) to have a first hand visual assessment of the existing situation
2. Comprehensive design and execution proposal, with necessary support for structural assessment or structural design and analysis services
