

AEGION®

Stronger. Safer. Infrastructure.®

Engineers

Fyfe Company offers engineers personalized technical support to help with projects from the feasibility stage to project completion. Engineers, designers and material specialists are available to answer questions about Fyfe Company's products and project-specific designs.

Our services to engineering or architectural professionals for their structural strengthening requirements range from:

1. No cost, no obligation review of potential applications for feasibility and budget proposals
2. Providing complete structural composite design proposals using the appropriately selected Tyfo® products and Fibrwrap® systems while conforming to the international FRP design guidelines and codes
3. Providing specifications, drawings, detailing and installation support
4. Providing quality control and design validation support by way of composite material properties and structural performance testing at accredited test facilities
